

FB-PLC Advanced User's Manual

CONTENTS

Chapter 9 Advanced Application Instructions

●	Arithmetical operation instructions	(FUN23~30)	9-2
●	Logical operation instructions	(FUN35~36)	9-10
●	Comparison instruction	(FUN37)	9-12
●	Data movement instructions	(FUN40~48)	9-13
●	Shifting/Rotating instructions	(FUN51~54)	9-22
●	Code conversion instructions	(FUN57~64)	9-26
●	Flow control instructions	(FUN65~71)	9-40
●	Temperature control instructions 1	(FUN72~73)	9-47
●	I/O instructions	(FUN74~84)	9-49
●	Temperature control instructions 2	(FUN85~86)	9-63
●	Cumulative timer instructions	(FUN87~89)	9-65
●	Watchdog timer instructions	(FUN90~91)	9-67
●	High speed counting/timing instructions	(FUN92~93)	9-69
●	Report printing instructions	(FUN94)	9-71
●	Slow up/Slow down instructions	(FUN95)	9-73
●	Communication instructions	(FUN96~97)	9-75
●	Table instructions	(FUN100~113)	9-77
●	Matrix instructions	(FUN120~130)	9-95
●	NC positioning instructions	(FUN140~143)	9-107
●	Enable/Disable instructions	(FUN145~146)	9-111

Chapter 10 FB-PLC Interrupt Function

10.1	The principle and the structure of interrupt function	10-1
10.2	Structure and application of interrupt service routine	10-2
10.3	Interrupt source, label and priority for FB-PLC	10-3
10.4	How to use interrupt of FB-PLC	10-5
10.5	Interrupt configuration	10-5
10.5.1	Example of external interrupt configuration by using FP-07	10-6
10.5.2	Internal timing interrupt configuration by R4162	10-7
10.6	Examples of interrupt routine	10-7

Chapter 11 FB-PLC High-Speed Counter and Timer

11.1	FB-PLC high-speed counter	11-1
11.1.1	Counting modes of FB-PLC high-speed counter	11-1
11.2	System architecture of FB-PLC high-speed counter	11-2
11.2.1	The up/down pulse input mode high-speed counter (MD0,MD1)	11-4
11.2.2	Pulse-direction input mode high-speed counter (MD2, MD3)	11-6
11.2.3	AB phase input mode high-speed counter (MD4,MD5,MD6,MD7)	11-7
11.3	Procedure for FB-PLC high-speed counter application	11-10
11.4	HSC/HST configuration	11-10
11.5	Examples for application of high-speed counter	11-14
11.6	FB-PLC high-speed timer	11-20
11.6.1	HSTA high-speed timer	11-20
11.6.2	HST0~HST3 high-speed delay timers	11-23
11.6.3	Examples for application of high-speed timer HSTA	11-24
11.6.4	Examples for application of high-speed timer HST0~HST3	11-28

Chapter 12 The Communication Function of FB-PLC

12.1	Functions and applications of FB-PLC communication ports	12-1
12.1.1	Communication Port 0 (port0) HCMOS(5V) serial interface	12-2
12.1.2	Communication Port 1 (port1) RS-232 serial interface	12-2
12.1.3	Communication Port2 (port2) RS-485 serial interface	12-3
12.2	FB-DTBR communication distributor	12-4
12.3	FB-DTBR communication distributor with Ethernet interface	12-4
12.4	Communication connectors and communication converters of FB-PLC	12-4
12.4.1	Communication connectors/cables/converters/cables-with-converters	12-5
12.4.2	Numbering rules of communication connector/cable/converter/cable-with-converter	12-5
12.4.3	Internal connection of communication connector/cable/converter/ cable-with-converter	12-6
12.5	How to make benefit via communication functions of FB-PLC	12-10
12.6	Notifications in arrangement of RS-485 communication	12-11
12.7	How to use FB-PLC communication port	12-14
12.7.1	Matching with hardware interface and mechanism	12-14
12.7.2	Setting of communication parameters	12-14

12.7.3	Setting of software interface	12-17
12.8	Description and application of software interface mode	12-17
12.8.1	Standard interface	12-17
12.8.2	Modem interface	12-17
12.8.3	Ladder program control interface	12-19

Chapter 13 The Applications for FB-PLC Link Function

13.1	Application of FUN96 (port2) instruction	13-2
13.1.1	Procedure for FUN96 (LINK2) usage	13-2
13.1.2	Explanation of respective modes and application program example for FUN96 (LINK2)	13-2
13.2	Application of FUN97 (port1) instruction	13-35
13.2.1	Procedure for FUN97 (LINK1) usage	13-35
13.2.2	Explanation of respective modes and application program example for FUN97 (LINK1)	13-35

Chapter 14 The NC Positioning Control of FB-PLC

14.1	The methods of NC positioning	14-1
14.2	Absolute coordinate and relative coordinate	14-1
14.3	Procedures of using FB-PLC positioning control	14-2
14.4	Explanation for the positioning control hardware of FB-PLC	14-3
14.4.1	Structure of output circuit of HSPSO	14-3
14.4.2	Hardware wiring layout for FB-PLC position	14-3
14.5	The explanation for the position control function of FB-PLC	14-5
14.5.1	Interface of stepping motor	14-6
14.5.2	Interface of servo motor	14-7
14.5.3	Working diagram illustration for servo motor	14-8
14.6	Explanation of function for NC position control instruction	14-8
14.7	Machine homing	14-24

Chapter 15 Application Of ASCII File Output Function

15.1	Format of ASCII file data	15-1
15.2	Application examples of ASCII file output	15-3

Chapter 16 Real Time Clock (RTC)

16.1	Correspondence between RTC and the RTCR within PLC	16-1
16.2	RTC access control and setting	16-2

Chapter 17 FB-7SG 7-Segment LED Display Module

17.1	FB-7SG brief introduction	17-1
17.2	Procedure for FB-7SG 7-segment LED display module usage	17-2
17.3	Hardware connection and configuration for FB-7SG	17-3
17.3.1	FB-7SG hardware wiring layout	17-3
17.3.2	The hardware setting of FB-7SG	17-3
17.3.3	Checking the over voltage(O.V.) of FB-7SG	17-5
17.4	The detailed layout for 7-segment LED display and independent LED display circuit	17-6
17.5	Decode and non-decode display	17-7
17.6	The power input specifications and power dissipation of FB-7SG	17-9
17.7	Explanation of FUN84:7SGMO, which is the handy instruction for FB-7SG	17-9
17.8	Program example	17-12

Chapter 18 FB-6AD Analog Input Module

18.1	Specifications of FB-6AD functions	18-1
18.2	The procedure of using FB-6AD Analogue input module	18-1
18.3	Address allocation of FB-PLC Analogue inputs	18-2
18.4	Explanation of FB-6AD hardware	18-3
18.5	The input circuit of FB-6AD	18-5
18.6	The input characteristic and jumper setting of FB-6AD	18-5
18.7	Notifications for the operation of FB-6AD	18-8

Chapter 19 FB-2DA Analog Output Module

19.1	Specifications of FB-2DA functions	19-1
19.2	The procedure of using FB-2DA analogue output module	19-1
19.3	Address allocation of FB-PLC analogue outputs	19-2
19.4	Explanation of FB-2DA hardware	19-3
19.5	The output circuit of FB-2DA	19-5
19.6	The output characteristic and jumper setting of D/A	19-6
19.7	Notifications for the operation of FB-2DA	19-8

Chapter 20 Temperature Measuring of FB-PLC and PID Control

20.1	Specifications of temperature measuring modules of FB-PLC	20-1
------	---	------

20.1.1	FB-2AJ(K)4: with 4 points of J(K) thermocouple input and 2 points of analog input	20-1
20.1.2	FB-4AJ(K)12/18/24: with 12/18/24 points of J(K) thermocouple input and 4 points of analog input	20-2
20.1.3	FB-2AH(T)4: with 4 points of 3-wires PT-100(PT-1000) RTD input and 2 points of analog input	20-2
20.2	The procedure of using temperature measuring module of FB-PLC	20-3
20.2.1	Temperature measurement only	20-3
20.2.2	Closed loop PID temperature control	20-3
20.3	Explanation on the hardware of temperature measuring module	20-4
20.3.1	The outlook of FB-2AJ(K)4 and top view of PC-board	20-4
20.3.2	The outlook of FB-4AJ(K)×× and top view of PC Board	20-6
20.3.3	The outlook of FB-2AH(T) and top view of PC Board	20-9
20.4	Wiring of the temperature modules	20-11
20.4.1	Wiring of the J/K thermocouple input Module	20-11
20.4.2	Wiring of 3-wires PT-100/PT-1000 RTD input module	20-12
20.5	The input characteristic and jumper setting of temperature module	20-13
20.5.1	Temperature module of thermocouple inputs	20-13
20.5.2	Temperature module of 3-wires RTD inputs	20-15
20.6	Notifications for the operation of temperature modules	20-17
20.7	Instruction explanation and program example for temperature measurement and PID temperature control of FB-PLC	20-17

Chapter 21 The PID Instruction and Application of FB-PLC

21.1	Introduction of PID control	21-1
21.2	How to select the controller	21-1
21.2.1	Proportional controller	21-1
21.2.2	Proportional + Integral controller	21-1
21.2.3	Proportional + Integral + Derivative controller	21-1
21.3	Explanation of the PID Instruction and program example	21-1
