### **Features**

#### **SoC-FATEK's Core Technology**

The FBs-PLC's design incorporates a "System on Chip" (SoC) developed in-house by Fatek Corporation. The BGA chip consists of over 120,000 gates which integrates powerful features such as a Central Processing Unit (CPU), Memory, Hardware Logic Solver (HLS), 5 high-speed communication ports, 4 sets of hardware high-speed counters/timers, 4 axes of high-speed pulse outputs for NC positioning control (with linear interpolation), 16 high-speed interrupts and captured inputs. The FBs-PLC represents high functionality and reliability with exceptional value compared to other PLC's in its class.

#### **User friendly and powerful instruction sets**

The FBs-PLC has more than 300 instructions which adopts a user friendly and readable multi-input/multi-output function structure. With this multi-input instruction structure the user can derive many types of functionality which other brands of PLC's may require the use of many instructions to achieve this. Also the operation result can be directly sent to internal or external outputs. To increase the program readability, the inputs or outputs for each function instruction have their own mnemonic symbol attached and the content of each operand is also displayed. For high-end applications, such as PLC networking (LINK), PID control and NC positioning etc, the FBs-PLC provides dedicated convenient instructions to assist in program development.

# Communication function (up to 5 ports including RS232, RS485, USB, Ethernet, CANopen® and GSM and ZigBee™ wireless communication)

Via the five high-speed communication ports included in the SoC, the FBs-PLC's communication capability is outstanding operating at a maximum speed of 921.6Kbps. Communications can be achieved using ASCII code or the double-speed binary code. Along with FATEK's standard protocol, Modbus ASCII/RTU/TCP or user-definable protocols are also available. The FBs-PLC also provides the option of 8 different communication boards and 10 different communication modules for various types of communication applications. With their high speed and functionality the FBs-PLC has the greatest number of communication ports than any other PLC in its class. Each communication port standard with LED indicators for transmission (TX) and reception (RX) to enable the user to monitor the operation.

## Up to 4 sets of high-speed pulse width modulation (HSPWM) output

The SoC inside the FBs-PLC incorporates four sets of hardware high-speed pulse width modulation outputs with a maximum frequency of 184.32KHz and 18.432KHz with resolutions of 1% and 0.1%, respectively. Different from the PWM function operated by software alone in other brands of PLC's, the hardware driven high-speed PWM in the FBs-PLC provides the user with easy control with high precision and stability.

## PLC & NC Control in one and Dedicated NC Positioning Language

NC Position Control is incorporated into the SoC of the FBs-PLC which integrates PLC+NC control into one unit in order for resources sharing and reducing the need of data exchange. The NC position control adopts special positioning command language, which allows programming by mechanical or electrical units and the changing control of parameters during execution. One single unit has up to four axes outputs with a maximum frequency of 200KHz (MC) or 920KHz (MN) and equipped with multi-axis linear interpolation function. If combined with the four sets of built-in HHSC, it can achieve a fully closed loop positioning control!

## Integrated high-speed counters with counting frequency up to 920 KHz

The FBs-PLC includes up to 4 sets of hardware high-speed counters (HHSC) and 4 sets of software high-speed counters (SHSC). The highest counting frequency of a HHSC is 200KHz (MC) or 920KHz (MN). Each HHSC also has a clear and mask function. There are 8 counting modes including U/D, U/Dx2, P/R, P/Rx2, A/B, A/Bx2, A/Bx3 and A/Bx4 which makes the HHSC very powerful and efficient. For example, if the encoder, running at 200 pulses per revolution, adopts A/Bx4 mode the FBs-PLC can achieve the same result that 800 pulses per revolution encoder can provide. The counter is implemented in the hardware so as not to occupy CPU processing time. In addition, 4 sets of software high-speed counters (SHSC) has U/D, P/R, A/B 3 types of counting modes and the total counting frequency is 5KHz.

#### **High-speed timers (HST)**

The FBs-PLC is the only PLC in this class providing 0.1mS high-speed timers (the FBs-PLC having one 16-bit and 4 sets of 32-bit HST). Currently, the fastest time base of high speed timers used in other brands of PLC's is 1mS. By incorporating the interrupt function of the FBs-PLC the accuracy of 0.1mS time base high-speed timer of FBs-PLC is further enhanced and can easily achieve more precise speed detection or can be used as a frequency meter. In most cases, expensive speed detection equipment can be replaced by the economical FBs-PLC.

#### **FATEK's Powerful Communication Features**

The five communication ports in FBs-PLC can simultaneously connect to various intelligent peripherals with various interfaces such as USB, RS232, RS485, Ethernet, CANopen® and ZigBee™. Apart from the FATEK and Modbus protocol or communication through the FATEK communication server, the user can also use the PLC's CLINK instruction for user-defined protocol to actively or passively establish connections with many intelligent peripherals.

#### **Open communication driver**

The open communication protocol of the FBs-PLC is supported by all major brands of Supervisory Software (Scada) and Operator Terminals (HMI). Scada software such as Wonderware, Citec, Labview and LabLink! Operator terminals (HMI) such as Proface, Hitech/Beijer and Cermate can be directly connected with the FBs-PLC via serial and Ethernet interfaces. FATEK also provides FATEK DDE standard communication server or third-party OPC server for the user to easily connect the FBs-PLC to various control or supervisory systems. In addition, reputable companies such as National Instruments and KONTRON both sell FATEK OPC software package for users.

#### **Complete range of peripherals**

In addition to over 200 models of main CPU units, the FBs-PLC also provides about 100 models of expansion I/O for selection. The expansion I/O modules include basic DI/O, AI/O and other communication modules, also include thumbwheel switch input module, 16/7 segment LED display module, 8 types (J, K, R, S, E, T, B, N) thermocouple, Pt100, Pt1000 RTD temperature measurement modules. There is also a new additions to the range including load cell module used in weighting, potential meter module used in measuring position, and a user-friendly voice module. The FBs-PLC also provides a FBs-DAP or FBs- PEP simple HMI which can be linked together with a single RS485 bus. The FBs-DAP or FBs-PEP can be a simple Timer/Counter editor or it can also be used as a simple human machine interface through the function of user definable keys and message display. The FBs-DAP or FBs-PEP can be equipped with a wireless RFID sensing module and can be applied to such applications as entrance control, parking equipment and elevator control amongst others.

#### **User-friendly operating environment**

"WinProladder" is the Windows-based ladder diagram programming software for the FBs-PLC. It provides a user-friendly operating environment with editing, monitoring and debugging functions which allows the user to become familiar with the operation of the software in a very short time. The powerful editing function of WinProladder, assisted with keyboard, mouse and on-line help (of ladder instructions and operating guide) greatly reduces programming development time. Features which can display the data registers directly in the ladder diagram and provide multiple status pages for monitoring gives the user the ability to monitor and debug easily.

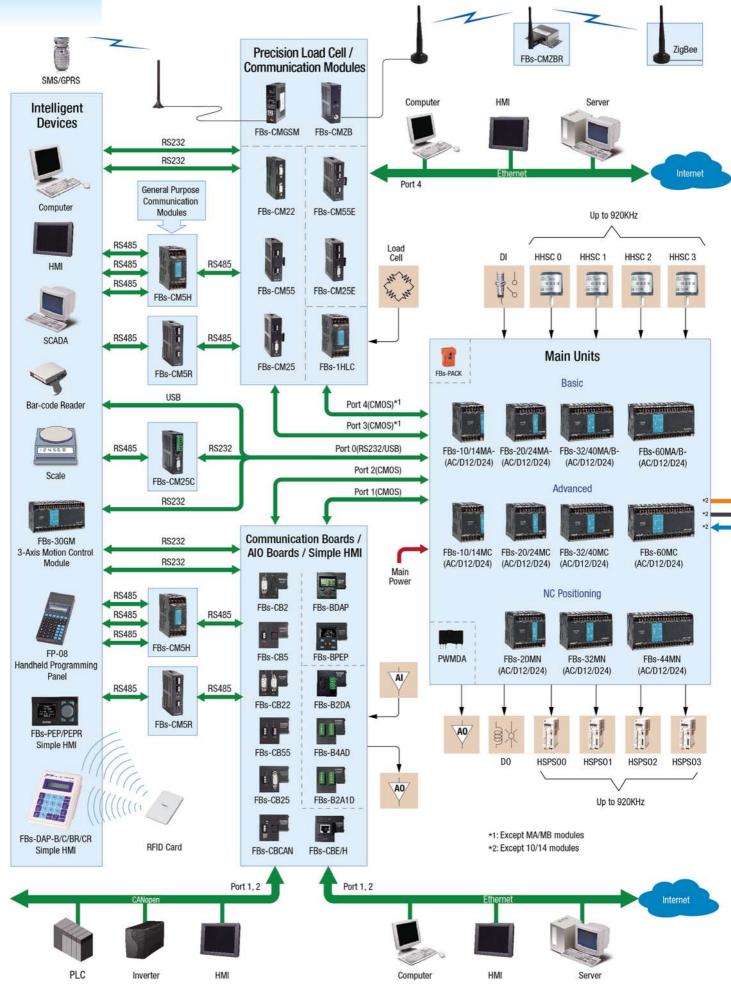

#### Up to 36 points of captured input

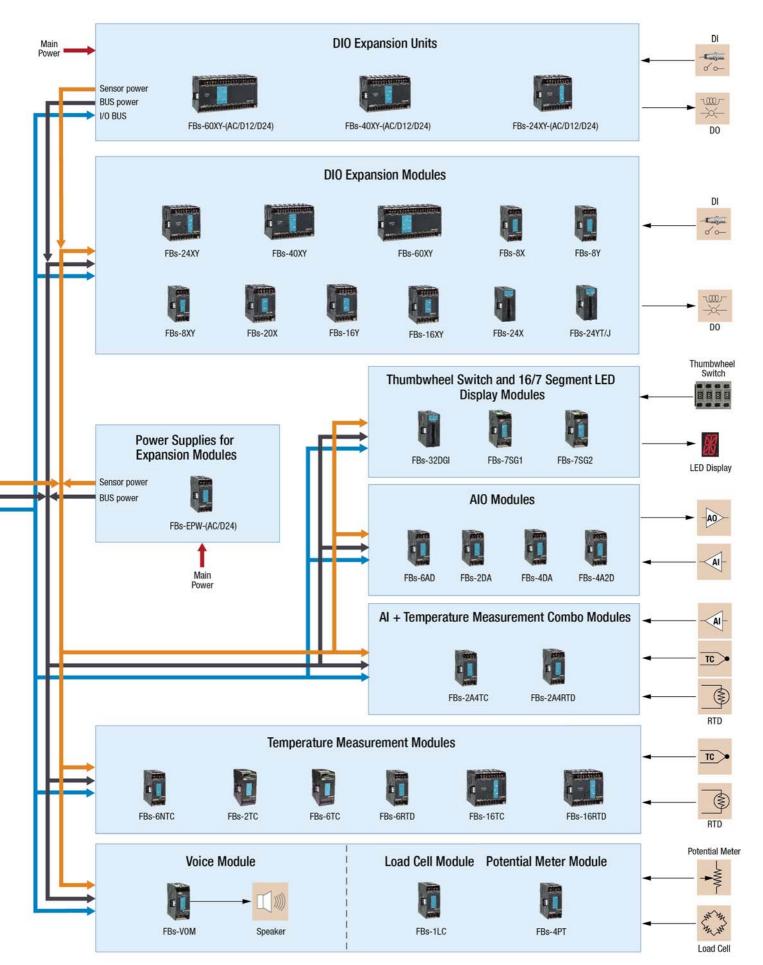

The SoC in the FBs-PLC has a captured input function, which captures and stores the external pulse of an input shorter than the scanning time of the CPU. Compared to PLC's in this class that either lack this capability or require highly sophisticated interrupt functions (which increase the CPU processing time), the FBs-PLC can handle this task easily as a general input, easily configured with high efficiency and no detriment the CPU scan time.

#### Single unit with 16 points of high-speed interrupt

The FBs-PLC provides 16 points of external interrupts. The interrupt is edge driven and the user can define which edge triggers the interrupt and can be positive, negative or both edges. The interrupts can perform high speed, emergency processing which can withstand the time jilter caused by the delay and deviation of the scan time and can be used for precision high speed positioning, machine home and high speed RPM measurement applications.

## **Training Box**

#### **Training Box**

Specification Model			FBs-TB0X	
Case		Aluminum suitcase. Dimension is 46x32x16cm. Top cover and box body can be separated.		
Power supply		100~240VAC / 2A fuse / power switch with indicator		
	PLC		FBs-24MCT(transistor output)+FBs-CM25E(Ethernet communication module)	
	Programmer	FP-08 handheld programming panel, can develop program, monitor (optional)		
Programming tool	Winproladder		Instructor site: WinProladder with 'teaching assistant' utility	
1001	Programming Software		Student site: WinProladder	
	Built-in	Port0	RS 232 Mini-DIN	
	Communication	Port1		
Communication	board(CB) (optional)	Port2	RS232 or RS485 selectable, directly mounted on FBs-24MCT main unit	
interface	FBs-CM25E	Port3	RS232, standard DB-9F connector	
		Port4	RS485, 3-pin European terminal block	
		(Port4)	Ethernet 10 Base T, IEEE 802.3 standard. Use port4 to interface PLC main unit	
Input interface			Banana terminal and simulation switch with automatic and manual reset functions	
Output interface		Banana terminal, 10 points. Transistor output (Y0~Y9). All outputs buffer with discrete relay before come to terminal.  Y0 and Y1 also provide a direct output terminal for high-speed pulse output (HSPSO) application.		
Expansion module (optional)		Secured by DIN Rail, 12.5cm wide slot, can accommodate three 4cm thin modules or other modules with equivalent width		
	Display module	4 digits 7-segment display module, attached with BCD decoding circuit		
	Thumbwheel switch	4 digits BCD thumbwheel switch module		
Application	Keyboard module	4 x 4 matrix keyboard module (Wiring coordinate with convenient instruction)		
peripheral	Encoder	Power supply 24VDC, 200P/R, open collector, A/B phase		
	Stepping motor	Pules/DIR control, 200P/R		
	LED display	10 of 10mmØ high-brightness LED (in red, yellow, and green), driven individually by Y0 to Y9		
Number o	of linked stations		Maximum 254 stations (1 station for instructor, 253 stations for student)	

#### **Features:**

- It contains the basic items required by PLC digital I/O training, such as the FBs-24MCT advanced main unit, the FBs-CM25E Ethernet module, digital input socket, simulated switches, and digital output socket.
- The built-in RS232, RS485 and the Ethernet three ports (can be expanded to five with communication boards) not only enable the teacher's computer to connect with the training kits of all students to conduct networking on-line teaching such as loading, monitoring, modifying, and storing, but also can be used in advanced course such as computer connection, intelligent ASCII peripherals as well.

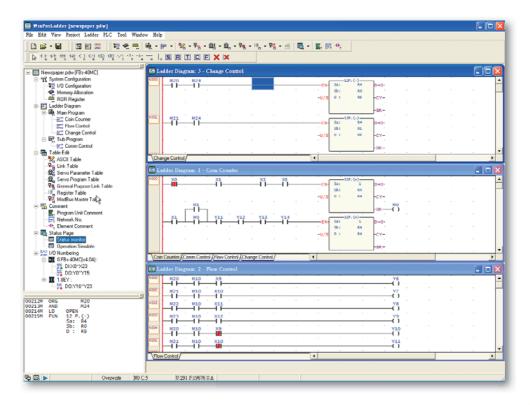

- A special designed software
   "WinProladder teaching assistant" can
   let instructor download or upload ladder
   program to or from the PLC of the whole
   class or individual through computer.
- PLC output is isolated by the Relay with socket and fuse and then output to terminal. These isolations can prevent PLC from damaging caused by incorrect wiring and easy for repair and replacement.

## **Program Development Software**

#### **General Features**

- Windows based application program following the standard conventions of a windows environment for ease of learning and operation regardless of whether the user is a beginner or frequent user.
- Application environment for project development is via a hierarchical tree. All the elements of the project can be activated by directly clicking the mouse button on the tree object providing comprehensive access and views of the working project.
- Easy entry methods which incorporate both the keyboard and mouse as entry devices. No matter whether on site or in an office environment the software can be operated with ease and efficiency.
- Provides various types of connections to the PLC via a PC. Connections include serial, USB, Ethernet / Internet and Modem. For every different connection WinProladder provides a session name to associate the setting of the communication parameters, such as port no., baud rate, IP address, phone number, etc.

Instruction	Operand	Ladder symbol	Function
OR		<b>1</b>	Parallel connect with an A contact
OR NOT	X,Y,M,	1-/-1	Parallel connect with a B contact
OR TU	S,T,C	<b>1</b>	Parallel connect with a TU contact
ORTD		<b>1</b> —↓↓ - <b>1</b>	Parallel connect with a TD contact
OR OPEN		1 1	Parallel connect with an open contact
OR SHORT		<b>1</b>	Parallel connect with a short contact
ANDLD		<b>—</b>	Concatenate two blocks in series
ORLD			Merge two blocks in parallel
OUT	VMC	• ( )	Output result to coil
OUT NOT	Y,M,S	• (/)	Output the inverse of result to a coil
OUT L	Υ	<b>→</b> (L)	Output result to a retentive coil
OUT	TR		Store node status in temporary relay
LD	IK		Retrieve node status from temporary relay
TU		<b>-</b> -↑	Take differential up of node status
TD		<b>→</b> ↓ <b>→</b>	Take differential down of node status
NOT		<b>→</b> / <b>→</b>	Inverse node status
SET		<b>→</b> (S)	Set a coil
RST		<b>→</b> (R)	Reset a coil

#### Step ladder instructions (SFC)

Instruction	Operand	Ladder symbol	Function
STP	Snnn	STP-	Define STEP program
STPEND		STPEND	STEP program end

#### **Function instructions**

Category	NO.	Instruction	Derivative	Function
Timer		Tnnn		General timer instruction (T0 ~ T255)
Counter		Cnnn		General counter instruction (CO ~ C255)
Counter	7	UDCTR	D	16 or 32-bit up/down counter
0 111 /		SET	DP	Set all bits of register or a discrete point to 1
Setting / Resetting		RST	DP	Clear all bits of register or a discrete point to 0
rioscitting	114	Z-WR	Р	Zone set or clear
Distri	4	DIFU		Take differential up of the node status to operand
Digital operation	5	DIFD		Take differential down of the node status too operand
	10	TOGG		Toggle the coil status
	11	(+)	DP	Sa+Sb → D
	12	(-)	DP	$Sa-Sb \rightarrow D$
	13	(×)	DP	$Sa \times Sb \rightarrow D$
	14	(/)	DP	$Sa / Sb \rightarrow D$
	15	(+1)	DP	Add 1 to D
	16	(-1)	DP	Subtract 1 from D
	23	DIV48	Р	48 bits integer division Sa / Sb → D
Ma	24	SUM	DP	Sum of N consecutive registers
ther	25	MEAN	DP	Average of N consecutive registers
Mathematical operation	26	SQRT	DP	Square root of S
cal	27	NEG	DP	Two's complement of D (Negative number)
	28	ABS	DP	Absolute value of D
	29	EXT	Р	Extend 16 bits into 32 bits
	30	PID	Р	PID calculation
	31	CRC16	Р	CRC16 calculation
	32	ADCNV		Offset and full scale conversion for analog input
	33	LCNV	Р	Linear conversion
	34	MLC	Р	Multiple linear conversion
