

- Support the FUN96(LINK2), FUN97(LINK1) communication instructions being executed in the fixed time interrupt service routine if necessary for applications.
- Improve the response time for temperature related instructions FUN72(TP4), FUN73(TSTC) combining with the FB-2AJ(K/H/T)4E temperature modules, the fast update time may reach up to 0.4 second.

Description : Set the value of register R4014 to change the response time of temperature measurement, for examples:

R4014=100, it means the response time is 0.4 second

- 
- 
- 

R4014=250, it means the response time is 1 second

- 
- 
- 

R4014=2000, it means the response time is 8 seconds
